

Management of Anticoagulation in the Peri-Procedural Period Tool (MAP) Order Form

Laminated, color copies of the MAP Tool are available free of charge to healthcare providers, practices, and institutions in New York through the New York State Anticoagulation Coalition and IPRO, the CMS-designated Quality Improvement Organization for New York State. The MAP is intended to improve the quality of care provided to patients, with the goal of eliminating preventable adverse drug events associated with anticoagulant therapy. It is intended to be a guide only, and clinicians must exercise professional judgment when adjusting drug therapy for individual patients.

We ask that you only order quantities that you intend to put into immediate use, based on actual numbers of providers, practices, and patients at risk.

Quantity Desired (check one):

	10
	20
	50
	>50 (IPRO will contact you directly to discuss dissemination plans for your organization)
